Official statistics serving as an essential basis for work and decision making

Short Vita

Born in 1963

Qualification:

- Studies of mechanical engineering and studies of engineering education at the Technical University of Dresden
- Master's Degree in administrative sciences at the German University of Administrative Sciences Speyer

Professional background:

- since 1991 activity for the city administration of Großenhain
- 1992: Election to the alderman
- since 1993: Mayor of the city Großenhain
- since 2008: Lord Mayor of the large district town Großenhain
- since 1 August 2015: President of the Statistical Office of the Free State of Saxony and Land Returning Officer

Expertise

The Statistical Office of the Free State of Saxony (StLA) has a special expertise in the regionalized population projection. In addition, the StLA acts as a sponsoring country for the areas of social affairs, health and care within the Statistical Office Network. Furthermore, the StLA is in charge of the panel responsible for the “Gesundheitsökonomische Gesamtrechnungen der Länder”.

Professional environment

Politics, administration, science, business and other areas of public life rely on data from the official statistics provided by the Statistical Office of the Free State of Saxony. Especially in the field of population projection, these data represent an essential basis for work and decision making.

Vision

The CDD occupies many interesting topics that need to be further specified and networked, inter alia to mitigate the thread of the inevitable demographic developments.

Science can provide important “pre-think-work” in order to deal constructively with problems like an aging society or a reduction of the workforce.
