# Java

Mac OS X is the only major consumer operating system that comes complete with a fully configured and ready-to-use Java runtime and development environment. Professional Java developers are increasingly turning to the feature-rich Mac OS X as the operating system of choice for both Mac-based and cross-platform Java development projects. Mac OS X includes the full version of J2SE 1.5, pre-installed with the Java Development Kit (JDK) and the HotSpot virtual machine (VM), so you don't have to download, install, or configure anything.

### Getting Started

A guided introduction and learning path for developers new to Java in Mac OS X.

2008-03-11

[Reference: WebObjects 5.4.1 Reference](#)

Deploying Java applications on Mac OS X takes advantage of many built-in features, including 64-bit support, resolution independence, automatic support of multiprocessor hardware, native support for the Java Accessibility API, and the native Aqua look and feel. As a result, Java applications on Mac OS X look and perform like native applications on Mac OS X. [Read more...](#)

### Java for Mac OS X 10.5, Update 1

Java for Mac OS X 10.5, Update 1 is now available via Software Update. This update adds Java SE 6 version 1.6.0\_05 to 64-bit Intel Macs.

For more details on this update, visit:

<http://docs.info.apple.com/article.html?artnum=307403>

**DOWNLOAD**

**System Requirements**  
You need to have Java installed on your system. You need one of the following versions:  
**JDK 6, JDK 5 or J2SE 1.4.2**  
Note that you need the version labeled **JDK**, not **JRE**, or the Netbeans or EE versions.  
**Windows Vista** users must use JDK 6 ([read this](#) for details).  
Details about [system requirements are here](#).  
On **MacOS X**, a recent Java SDK version is installed by default. You do not need to install Java on this system.  
**Other downloads**  
[Previous BlueJ versions.](#)  
[Editor source code.](#)

**Step 1: Get Java**  
Check the system requirements (right side of this page). Make sure you have an appropriate version of Java installed.

**Step 2: Download the installation package**  
Latest official release:  
**BlueJ version 2.2.1**  
for **Windows** (3.6Mb) [bluejsetup-221.exe](#)  
for **MacOS X** (3.2 Mb) [BlueJ-221.zip](#)  
for **all other systems** (executable jar file) (3.1 Mb) [bluej-221.jar](#)  
(If your browser tries to display the file, instead of downloading it, then use "Save link as.." which you get when you right-click or shift-click the link.)

Once you have loaded the file, [go to the Installation Instructions.](#)
