Slide 3 of 29   DRESDEN concept

Motivation

- Understanding the inner workings of a processor is hard
- Building even small processors from scratch is quite hard

How about having a building kit for learning, teaching and experimentation?

TECHNISCHE UNIVERSITÄT DRESDEN Design and Prototype Implementation of a Modular Reconfigurable Processor Architecture Kit
Chair for VLSI Design, Diagnostics and Architecture // Fredo Erxleben
Dresden, June 7, 2018   Slide 4 of 29 DRESDEN concept

The Task

1. Research different approaches to processor construction
2. Identify common atomic components and their interaction
3. Design a set of modules that can be recombined into different processor architectures
4. Produce prototype modules, build demonstrative setups, and compare these

TECHNISCHE UNIVERSITÄT DRESDEN

Slide 5 of 29   DRESDEN concept

Quick Reminder

PCB: Printed Circuit Board

Units: $1\,\text{in} = 2.54\,\text{cm} = 1000\,\text{mil (US)}$

Caution

$1\,\text{mil (US)} \quad = 1\,\text{thou (GB)}$

$1\,\text{mil (GB)} \quad = 1\,\text{mm}$

concept

Where to begin?

- Modern architectures are terribly complex
- Details of commercial implementations are usually not public
- Many architectures are only described at the instruction level

Most promising approach

Check out the really old manuals and hobbyist projects

TECHNISCHE UNIVERSITÄT DRESDEN Design and Prototype Implementation of a Modular Reconfigurable Processor Architecture Kit

Slide 10 of 29
DRESDEN concept

Didactic Considerations I

- Each module must encapsulate one well-defined functionality
- Use widely available, affordable standard components
- PCB layout must fit in a grid for easy recombination
- Design as few simple interfaces as possible

TECHNISCHE UNIVERSITÄT DRESDEN Design and Prototype Implementation of a Modular Reconfigurable Processor Architecture Kit
Chair for VLSI Design, Diagnostics and Architecture // Fredo Erxleben
Dresden, June 7, 2018   Slide 11 of 29   DRESDEN concept

Didactic Considerations II

Conflict: Functional Purity vs. Versatility

Functional Purity: A module does exactly one thing.
→ As few additional components as possible
Versatility: A module should be used in many different combinations
→ Additional components are required

Design decisions must be made on a case-by-case basis.

Dresden, June 7, 2018

Slide 12 of 29

Didactic Considerations III

Design Cornerstone

Data width: 8 bit
Address width: 16 bit (Can always scale down)
$\rightarrow$ Usable and comprehensible
Starting out small

ALU reduced to an adder
Control logic mapped to ROM lookup table

And: Only very low operation frequencies required (1 ... 100 Hz)

TECHNISCHE UNIVERSITÄT DRESDEN

Dresden, June 7, 2018

Slide 13 of 29   DRESDEN concept

The Module Grid Layout I

- Based on the common 2.54 mm raster
- Use through-hole mounting for easy assembly
- Modules may occupy multiple grid units
- Connection via dedicated bridge modules, ribbon cable or single jumper wires

TECHNISCHE UNIVERSITÄT DRESDEN

Slide 14 of 29
DRESDEN concept

The Module Grid Layout II

1500 mil
38.10 mm

1300 mil
33.02 mm

Logic Area

Pin Interface

Border area can also be used for silk screen text

Mounting Holes
$\varnothing$2mm

The Module Grid Layout III

- Tiling works horizontally and vertically
- Use compass directions as orientation reference

NW corner

200 mil
5.08 mm
Pin 0

Interface Design I

- 2 interface types: *Control* and *Data*
- Each interface uses a $10{\times}1$-pin male header
- Pin 0 always is $+5\,V$, Pin 9 always is *GND*

TECHNISCHE UNIVERSITÄT DRESDEN   Design and Prototype Implementation of a Modular Reconfigurable Processor Architecture Kit
Chair for VLSI Design, Diagnostics and Architecture // Fredo Erxleben
Dresden, June 7, 2018   Slide 17 of 29   DRESDEN concept

Interface Design II

Data Interface

- Always on the *West* and *East* side of the chip
- Pin 0 is always oriented *North*
- Primary data flow direction is *West* → *East*

0	○	+5V
1	○	Data 0
2	○	Data 1

DRESDEN
concept

The Bare Necessities I

Clock Pulse Generator
- 2 modes of operation:
- Automatic (0.7 Hz . . . 480 Hz)
- Manual stepping via push-button

Binary Counter, 16 bit (WIP)
- New current value can be set anytime

TECHNISCHE UNIVERSITÄT DRESDEN — Design and Prototype Implementation of a Modular Reconfigurable Processor Architecture Kit
Chair for VLSI Design, Diagnostics and Architecture // Fredo Erxleben
Dresden, June 7, 2018 — Slide 21 of 29 — DRESDEN concept

The Bare Necessities II

Adder, 8 bit
- Provides a Zero- and Overflow flag
- Optional signed interpretation of second argument also allows for subtraction

Bus Interconnect (WIP)
- 3 *Data* interfaces on East/West side
- Need to be chained
  $\rightarrow$ Exception: North/South interfaces are *Data*, not *Control*

TECHNISCHE UNIVERSITÄT DRESDEN — Design and Prototype Implementation of a Modular Reconfigurable Processor Architecture Kit

Dresden, June 7, 2018

Slide 22 of 29   DRESDEN concept

Memory I

Register, 8 bit
- Based on `74HC173`
- Provides dedicated $\overline{IE}$, $\overline{OE}$, RST

EEPROM
- Dual (C)`AT28C256`: 65 536 bytes
- Socketed, for programming via external tools

TECHNISCHE UNIVERSITÄT DRESDEN
Design and Prototype Implementation of a Modular Reconfigurable Processor Architecture Kit

Dresden, June 7, 2018
Slide 23 of 29
DRESDEN concept

Memory II

RAM

- Dual 62256 or CY7194: 65 536 bytes
- Built-in address registers
- Address and data can be provided in parallel or byte-serial

Tricky Issue

How to easily load an initial program into the live RAM?

Solution

Added debugging / programming interface and programmer board.
$\rightarrow$ Most complicated module so far

Current State

Current State:
- Concept is complete
- Module design is nearly complete

Issues:
- Checking availability / alternatives for components is time-consuming
- Learning to use *KiCad* effectively took some time
- Designs need to be re-checked from time to time

TECHNISCHE UNIVERSITÄT DRESDEN

Slide 26 of 29
DRESDEN concept

Upcoming Improvements

- Increase logic area size on modules
- Externalize built-in registers of many modules
- Externalize built-in transceivers

Hot Question

Move transceivers into bus module or a separate module?

- Improved routing
- Easier to understand modules
- Improved design flexibility
- Forces user to learn when to use registers

Slide 27 of 29

DRESDEN concept

Roadmap

The Plan:
- Finish the PCB designs
- Order PCBs, parts, and assemble them
- Build test architectures

Issues:
- PCBs and parts must be ordered in bulk for cost efficiency
