

OBRIST Engineering is an Austrian technology company with 20 years of experience in the development of thermal management components and systems, waste heat recovery systems and including automotive powertrains. We have extended our technological lead in mobile applications based on the natural refrigerant R744.

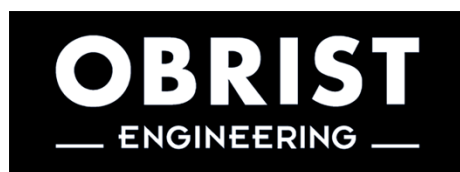

We can offer various possibilities for a

## Master Thesis

In the field of

- Design, Simulation, Development of Scroll Compressors for Natural Refrigerants, and other Applications
- Automotive, High-Efficient, Innovative Thermal Systems with Natural Refrigerants
- Development, Testing and Validation of Compressors, Components, Systems for Automotive Applications and Bench Level and in Vehicles

We can offer high-level, state of the art development tools like GT Suite and 3D design, capabilities, a well-experienced team in a family-owned small dynamic company. International projects with market-leading OEMs/TIER1s. We are located in a beautiful surrounding in Austria/Vorarlberg. Exciting tasks, fair payment, and the possibility of full-time employment after the master thesis are waiting. If you are interested and motivated, feel free to contact us:
