Context and motivation

Chromochloris zofingiensis

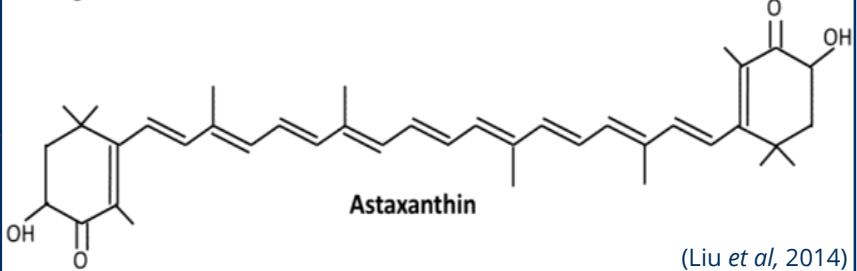

No data for a promising and efficient commercial production

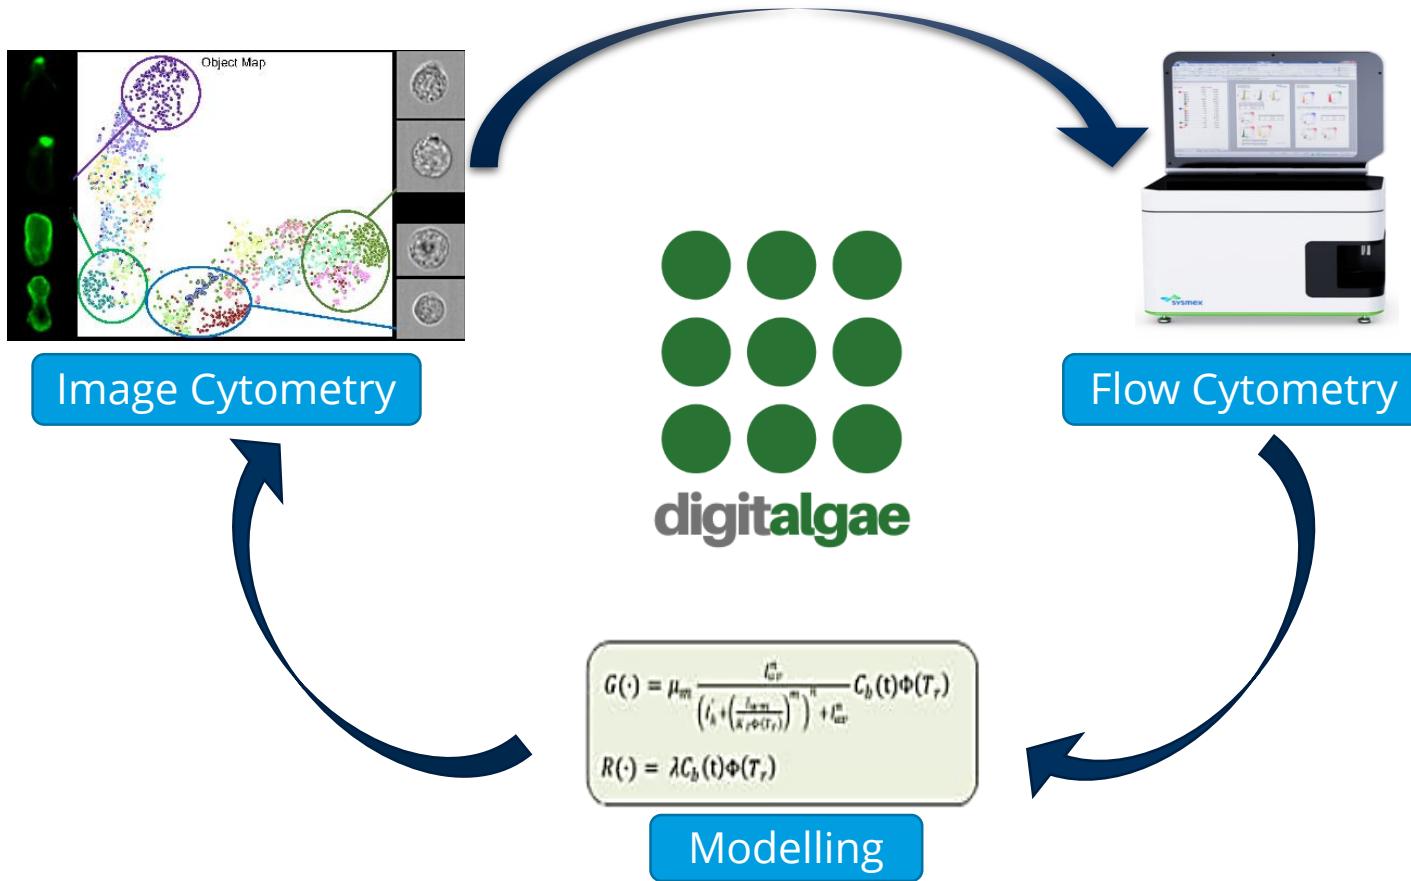

Yields are directly affected by cell cycle events

High value pharmaceutical & nutritional pigment

Applied techniques

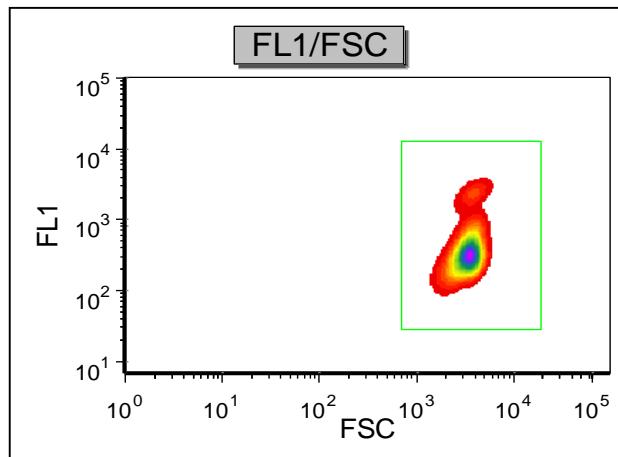

State of the project

- Optimization of microalgae DNA staining: experimental design, impacts and validation (*In preparation*)

SYTO 9

Solution Response	95% PI low	Data Mean	95% PI high
Staining efficiency	99,6	99,8	99,86

SYBR Green I

Solution Response	95% PI low	Data Mean	95% PI high
Staining efficiency	99,5	99,6	99,9

Internship opportunity

Flow cytometry

Microalgae biotechnology

Microalgae single-cell analytics

Bioprocess modelling

Innovative microalgae cultivation techniques
