March 23, 2015

Catalan Objects

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

Motivation

231-Avoiding
Permutations

Noncrossing
Partitions

Nonnesting
Partitions

Tamari
Lattices

Outlook

- **Catalan numbers:** $\text{Cat}(n) = \frac{1}{n+1} \binom{2n}{n}$
- **Catalan objects:**
 - 231-avoiding permutations of $[n]$
 - triangulations of a $(n+2)$ -gon
 - noncrossing set partitions of $[n]$
 - nonnesting set partitions of $[n]$
 - ...
- they are robust enough to be generalized to all Coxeter groups
 - via the factorization $\text{Cat}(n) = \prod_{i=1}^{n-1} \frac{n+i+1}{i+1}$

Lattices

Henri Mühle
and Nathan
Williams

Motivation

231-Avoiding
Permutations

Noncrossing
Partitions

Nonnesting
Partitions

Tamari
Lattices

Outlook

- **Coxeter-Catalan numbers:** $\text{Cat}(W) = \prod_{i=1}^n \frac{d_n + d_i}{d_i}$
- **Coxeter-Catalan objects:**
 - sortable elements of W
 - W -clusters
 - noncrossing W -partitions
 - order ideals in the root poset of W
 - ...
- are they robust enough to survive further generalizations?
 - not in general, but possibly for the “coincidental groups” $A_n, B_n, I_2(k), H_3$

Noncrossing
Partitions

Nonnesting
Partitions

Tamari
Lattices

Outlook

- define parabolic Coxeter-Catalan objects
 - parabolic Coxeter-Catalan numbers?
 - bijections?
- we start with the symmetric group

The Symmetric Group \mathfrak{S}_n

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

Motivation

231-Avoiding
Permutations

Noncrossing
Partitions

Nonnesting
Partitions

Tamari
Lattices

Outlook

- **symmetric group** \mathfrak{S}_n : group of permutations of $[n]$
- **generators**: $s_i = (i \ i+1), i \in [n - 1]$
- $S = \{s_1, s_2, \dots, s_{n-1}\}$
- **inversion set**: $\text{inv}(w) = \{(i, j) \mid i < j, w_i > w_j\}$

Parabolic Quotients of \mathfrak{S}_n

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

Motivation

231-Avoiding
Permutations

Noncrossing
Partitions

Nonnesting
Partitions

Tamari
Lattices

Outlook

- **(standard) parabolic subgroup:**
subgroup $(\mathfrak{S}_n)_J$ generated by $J \subseteq S$
- **(standard) parabolic quotient:**
 $\mathfrak{S}_n^J = \{w \in \mathfrak{S}_n \mid \text{inv}(w) \subsetneq \text{inv}(ws) \text{ for all } s \in J\}$

Parabolic Quotients of \mathfrak{S}_n

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

Motivation

231-Avoiding
Permutations

Noncrossing
Partitions

Nonnesting
Partitions

Tamari
Lattices

Outlook

- $J = S \setminus \{s_{i_1}, s_{i_2}, \dots, s_{i_k}\}$
- one-line notation for $w \in \mathfrak{S}_n^J$:
 $w_1 < \dots < w_{i_1} | w_{i_1+1} < \dots < w_{i_2} | \dots | w_{i_k+1} < \dots < w_n$

Theorem (Björner & Wachs, 1997)

For $n > 0$ the Tamari lattice \mathcal{T}_n is isomorphic to the weak order on the 231-avoiding permutations of \mathfrak{S}_n , i.e. $\mathcal{T}_n \cong \text{Weak}(\mathfrak{S}_n(231))$.

- \mathcal{T}_n is a sublattice and a quotient lattice of $\text{Weak}(\mathfrak{S}_n)$

Theorem (Mühle & Williams, 2015)

For $n > 0$ and $J \subseteq S$, the poset $\text{Weak}(\mathfrak{S}_n^J(231))$ is a lattice, the *parabolic Tamari lattice* \mathcal{T}_n^J .

- for any $w \in \mathfrak{S}_n^J$ there is a unique maximal $w' \in \mathfrak{S}_n^J(231)$ with $w' \leq_S w$

Henri Mühle
and Nathan
Williams

Theorem (Serrano & Stump, 2011; Williams, 2013)

For $n > 0$ and $J \subseteq S$, we have $|\mathcal{S}_n^J| = |NN_n^J|$.

- Edelman-Greene insertion on positions of subword
- slight modification of the recording tableau

A Conjecture

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

- let c be a Coxeter element, let $w_o(c)$ be the c -sorting word of w_o

Conjecture (Williams, 2013)

Let (W, S) be a finite Coxeter system. For any Coxeter element $c \in W$ and any $J \subseteq S$, the flip poset of $\mathcal{S}(cw_o(c), w_o^J)$ is a lattice.

- works for $W = A_n$ and for $J = S \setminus \{s\}$
- in the latter case, w_o^J is fully commutative and $(\mathcal{S}(cw_o(c), w_o^J), \leq_{\text{flip}}) \cong \text{Weak}(e, w_o^J)$

A Conjecture

A Different Perspective

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

- fix reduced word $\mathbf{w} = a_1 a_2 \cdots a_k$ for $w \in W$
- **inversion sequence**: $t_1 \prec_{\mathbf{w}} t_2 \prec_{\mathbf{w}} \cdots \prec_{\mathbf{w}} t_k$, where
 $t_i = a_1 a_2 \cdots a_i \cdots a_2 a_1$
- **cover reflection**: $t \in \text{inv}(w)$ with $tw = ws$ for $s \in S$
 $\rightsquigarrow \text{cov}(w)$
- **w-aligned element**: $x \leq_S w$ with $t_{a\alpha+b\beta} \in \text{cov}(x)$ and
 $t_\alpha \prec_{\mathbf{w}} t_{a\alpha+b\beta}$, then $t_\alpha \in \text{inv}(x)$ $\rightsquigarrow \text{Sort}(W, \mathbf{w})$

A Different Perspective

Conjecture (Williams, 2013)

Let (W, S) be a finite Coxeter system. For any Coxeter element and any $J \subseteq S$, the facets of $\mathcal{S}(cw_0(c), w_0^J)$ are in bijection with $\text{Sort}(W, w_0^J(c))$.

A Different Perspective

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

Conjecture (Mühle & Williams, 2015)

Let (W, S) be a finite Coxeter system. For any Coxeter element c and any $w \in W$, the poset $\text{Weak}(\text{Sort}(W, w(c)))$ is a lattice.

A Different Perspective

On Parabolic
Tamari
Lattices

Henri Mühle
and Nathan
Williams

- it does not work for any reduced word
- $\text{Weak}(\text{Sort}(\mathfrak{S}_5, s_2s_1s_2s_3s_4s_2s_3s_1s_2s_1))$ is *not* a lattice
