einen Vortrag zum Thema

Kato square root problem – a personal review

Abstract:

Let $\$L\$$ be a second-order elliptic operator in divergence form with bounded and measurable coefficients and let $\$a\$$ be the corresponding sesquilinear form. The question that became famous as the 'Kato square root problem' is whether (or not) the domain of the maximal accretive square root of $\$L\$$ coincides with $\$D(a)\$$. For differential operators in $\$\mathbb{R}^n\$,$ this problem had remained unsolved between 1961 and 2001. A remarkable elaboration of the original proof was presented by Axelsson-Keith-McIntosh in 2006. I will try to give an overview of their proof, highlighting the use of functional calculus for Dirac operators, harmonic analysis and potential theory. I will end with a discussion of recent results on the problem for operators with Dirichlet boundary conditions on open subsets, joint with S. Bechtel and R. Haller-Dintelmann.

Datum: **Donnerstag, 2. Dezember 2021**
Zeit: **15:15 Uhr**

Der Vortrag findet über das Videokonferenzsystem „Zoom“ statt.

Ansprechpartner: Prof. Dr. Ralph Chill

Der virtuelle Raum ist über folgenden Link erreichbar:
