# Inhomogeneous differential algebraic equations on Hilbert space

#### Abstract:

The equation of interest for this talk will be the inhomogeneous differential algebraic equation  $Eu' + Au = f$ , where  $E$  is a bounded operator. As inspiration, we quickly recall the solution theory of the equation in finite dimensions, where a splitting of the state space separates the equation into two: the so-called differential and the algebraic part. Subsequently, we discuss how this approach can be extended to the Hilbert space case.
