# Contents

**Notation** . . . . . 9

**1 Basics** . . . . . 11
1.1 Classification and Correctness . . . . . 11
1.2 Fourier' s Method, Integral Transforms . . . . . 15
1.3 Maximum Principle, Fundamental Solution . . . . . 19
1.3.1 Elliptic Boundary Value Problems . . . . . 19
1.3.2 Parabolic Equations and Initial-Boundary Value Problems . . . . . 25
1.3.3 Hyperbolic Initial and Initial-Boundary Value Problems 28

**2 Finite Difference Methods** . . . . . 33
2.1 Basic Concepts . . . . . 33
2.2 Illustrative Examples . . . . . 41
2.3 Transportation Problems and Conservation Laws . . . . . 46
2.3.1 The One-Dimensional Linear Case . . . . . 47
2.3.2 Properties of Nonlinear Conservation Laws . . . . . 58
2.3.3 Difference Methods for Nonlinear Conservation Laws . . . 63
2.4 Elliptic Boundary Value Problems . . . . . 71
2.4.1 Elliptic Boundary Value Problems . . . . . 71
2.4.2 The Classical Approach to Finite Difference Methods . . 72
2.4.3 Discrete Green's Function . . . . . 84
2.4.4 Difference Stencils and Discretization in General Domains . . . . . 86
2.4.5 Mixed Derivatives, Fourth Order Operators . . . . . 92
2.4.6 Local Grid Refinements . . . . . 99
2.5 Finite Volume Methods as Finite Difference Schemes . . . . . 100
2.6 Parabolic Initial-Boundary Value Problems . . . . . 113
2.6.1 Problems in One Space Dimension . . . . . 114
2.6.2 Problems in Higher Space Dimensions . . . . . 119
2.6.3 Semi-Discretization . . . . . 123

2.7 Second-Order Hyperbolic Problems . . . . . 128

**3 Weak Solutions** . . . . . 135
3.1 Introduction . . . . . 135
3.2 Adapted Function Spaces . . . . . 138
3.3 Variational Equations and conforming Approximation . . . . . 152
3.4 Weakening V-ellipticity . . . . . 173
3.5 Nonlinear Problems . . . . . 177

**4 The Finite Element Method** . . . . . 183
4.1 A First Example . . . . . 183
4.2 Finite-Element-Spaces . . . . . 188
4.2.1 Local and Global Properties . . . . . 188
4.2.2 Examples of Finite Element Spaces in $\mathbb{R}^2$ and $\mathbb{R}^3$ . . . . . 199
4.3 Practical Aspects of the Finite Element Method . . . . . 212
4.3.1 Structure of a Finite Element Code . . . . . 212
4.3.2 Description of the Problem . . . . . 213
4.3.3 Generation of the Discrete Problem . . . . . 215
4.3.4 Mesh Generation and Manipulation . . . . . 220
4.4 Convergence of Conforming Methods . . . . . 227
4.4.1 Interpolation and Projection Error in Sobolev Spaces . . 227
4.4.2 Hilbert Space Error Estimates . . . . . 237
4.4.3 Inverse Inequalities and Pointwise Error Estimates . . . . . 242
4.5 Nonconforming Finite Element Methods . . . . . 248
4.5.1 Introduction . . . . . 248
4.5.2 Ansatz Spaces with Low Smoothness . . . . . 249
4.5.3 Numerical Integration . . . . . 254
4.5.4 The Finite Volume Method Analysed from a Finite Element Viewpoint . . . . . 261
4.5.5 Remarks on Curved Boundaries . . . . . 264
4.6 Mixed Finite Elements . . . . . 268
4.6.1 Mixed Variational Equations and Saddle Points . . . . . 268
4.6.2 Conforming Approximation of Mixed Variational Equations . . . . . 275
4.6.3 Weaker Regularity for the Poisson and Biharmonic Equations . . . . . 282
4.6.4 Penalty Methods and Modified Lagrange Functions . . . . 287
4.7 Error Estimators and adaptive FEM . . . . . 297
4.7.1 The Residual Error Estimator . . . . . 298
4.7.2 Averaging and Goal-Oriented Estimators . . . . . 302
4.8 The Discontinuous Galerkin Method . . . . . 304
4.8.1 The Primal Formulation for a Reaction-Diffusion Problem . . . . . 305
4.8.2 First-Order Hyperbolic Problems . . . . . 309
4.8.3 Error Estimates for a Convection-Diffusion Problem . . . 312

4.9 Further Aspects of the Finite Element Method . . . . . 316
4.9.1 Conditioning of the Stiffness Matrix . . . . . 316
4.9.2 Eigenvalue Problems . . . . . 317
4.9.3 Superconvergence . . . . . 320
4.9.4 p- and hp-Versions . . . . . 324

**5 Finite Element Methods for Unsteady Problems** . . . . . 327
5.1 Parabolic Problems . . . . . 327
5.1.1 On the Weak Formulation . . . . . 327
5.1.2 Semi-Discretization by Finite Elements . . . . . 331
5.1.3 Temporal Discretization by Standard Methods . . . . . 340
5.1.4 Temporal Discretization with Discontinuous Galerkin Methods . . . . . 347
5.1.5 Rothe's Method . . . . . 353
5.1.6 Error Control . . . . . 357
5.2 Second-Order Hyperbolic Problems . . . . . 366
5.2.1 Weak Formulation of the Problem . . . . . 366
5.2.2 Semi-Discretization by Finite Elements . . . . . 368
5.2.3 Temporal Discretization . . . . . 373
5.2.4 Rothe's Method for Hyperbolic Problems . . . . . 378
5.2.5 Remarks on Error Control . . . . . 382

**6 Singularly Perturbed Boundary Value Problems** . . . . . 385
6.1 Two-Point Boundary Value Problems . . . . . 386
6.1.1 Analytical Behaviour of the Solution . . . . . 386
6.1.2 Discretization on Standard Meshes . . . . . 393
6.1.3 Layer-adapted Meshes . . . . . 404
6.2 Parabolic Problems, One-dimensional in Space . . . . . 409
6.2.1 The Analytical Behaviour of the Solution . . . . . 409
6.2.2 Discretization . . . . . 411
6.3 Convection-Diffusion Problems in Several Dimensions . . . . . 416
6.3.1 Analysis of Elliptic Convection-Diffusion Problems . . . . . 416
6.3.2 Discretization on Standard Meshes . . . . . 422
6.3.3 Layer-adapted Meshes . . . . . 437
6.3.4 Parabolic Problems, Higher-Dimensional in Space . . . . . 440

**7 Variational Inequalities, Optimal Control** . . . . . 445
7.1 Analytic Properties . . . . . 445
7.2 Discretization of Variational Inequalities . . . . . 457
7.3 Penalty Methods . . . . . 467
7.3.1 Basic Concept of Penalty Methods . . . . . 467
7.3.2 Adjustment of Penalty and Discretization Parameters . . 483
7.4 Optimal Control of PDEs . . . . . 490
7.4.1 Analysis of an Elliptic Model Problem . . . . . 490
7.4.2 Discretization by Finite Element Methods . . . . . 499

**8 Numerical Methods for Discretized Problems** . . . . . 509
8.1 Some Particular Properties of the Problems . . . . . 509
8.2 Direct Methods . . . . . 512
8.2.1 Gaussian Elimination for Banded Matrices . . . . . 512
8.2.2 Fast Solution of Discrete Poisson Equations, FFT . . . . . 514
8.3 Classical Iterative Methods . . . . . 520
8.3.1 Basic Structure and Convergence . . . . . 520
8.3.2 Jacobi and Gauss-Seidel Methods . . . . . 524
8.3.3 Block Iterative Methods . . . . . 530
8.3.4 Relaxation and Splitting Methods . . . . . 534
8.4 The Conjugate Gradient Method . . . . . 540
8.4.1 The Basic Idea, Convergence Properties . . . . . 540
8.4.2 Preconditioned CG Methods . . . . . 548
8.5 Multigrid Methods . . . . . 558
8.6 Domain Decomposition, Parallel Algorithms . . . . . 570

**Bibliography: Textbooks and Monographs** . . . . . 581

**Bibliography: Original Papers** . . . . . 587

**Index** . . . . . 595
