The phase transition in geometric random graphs

Abstract:

In this talk we review the current research on phase transitions in geometric random graph models. In these models vertices are given by the points of a homogeneous Poisson point process in \mathbb{R}^d equipped with weights following a heavy tailed distribution. Each pair of vertices independently forms an edge with a probability decaying as a function of the weights divided by the distance of the vertices. We give necessary and sufficient conditions under which there is a percolation phase transition and, if there is one, we investigate its sharpness.

Mittwoch, 25.06.2025, 17:00 Uhr – Willers-Bau, Raum A 124

Leitung: Prof. Dr. René Schilling

Vor dem Vortrag findet **ab 16:30 Uhr** ein gemeinsames **Kaffee-/ Teetrinken** vor dem Vorträgsraum WIL A 124 statt.
