Research Interests	
1. Solid-state chemistry: various aspects of inorganic synthesis and crystal-growth techniques. 2. Crystal-structure elucidation (powder and single-crystal X-ray diffraction); characterization of bulk and nanoscaled materials (SEM and TEM techniques) with a focus on SAED and HRTEM.	

3. Solid-state physics: quantum-chemical calculations (DFT, *ab initio*) for periodic solids and finite molecules; topological analysis of chemical bonding in real space (ELF, ELI-D).
4. Topological materials, Rashba materials, frustrated magnets, magnetic materials: synthesis and chemical characterization.
