Contents and teaching methods

If not, was the workshop too long or too short? Which issues should have been discussed more in detail?

I would like to participate a two days (or longer course)

Further comments on this workshop / seminar:

What was the training like in general and what did you like / did not like in particular?

Like: script to seminar, teacher was friendly a lot

dislike: explanation of the mathematical background

I guess it will be nice if teacher will have assistance who might assist to students during the teaching time. How I observed, some students was not can all process same time.

I like the way that the trainer firstly asked us to learn by ourselves, and then answering our questions.

Excellent script material, easy to work from the texts, some more demonstrations would be good. Some discussion of common mistakes / problems would be helpful

Excellent. The provision of booklets were helpful for follow-ups and personal future studies.

Please make suggestions for future seminars and workshop topics. How could the qualification program be improved to better suit your educational need?

Please offer a seminar / workshop for statistical analysis in general as well. It may improve the knowledge of students who did not take statistics course in bachelors / masters.

The software learning workshop could be extended to more than one day so that the students could have more time to get familiar with it. One day is too short.

Offer a second course for dPQ, please. :)

I would appreciate more workshop with advance SPSS as I have now gone the basics of from today.
