Student and campus life

TU Dresden is the biggest technical university in Saxony and one of eleven Universities of Excellence in Germany offering more than 120 degree programs. It is home to about 29,000 students, including 21% international students. TUD promotes the achievements of the students, both before and during their studies, with a wide-ranging module system consisting of counseling and support programs.

To ensure that new students feel at ease right from the start, TUD organizes a broad range of welcome and information events. Tutors provide help and advice and so-called buddies make it easier for international students to adapt to the university's daily routine.

Together with the numerous computer labs, WIFI throughout the entire campus makes it easy to learn and work. Those seeking a quiet place with a great number of resources will find it in the Saxon State and University Library Dresden (SLUB). It is one of the largest and best-equipped academic libraries in Germany.

Food is also provided on campus. Every day, around 20,000 guests enjoy their meals in the canteens and cafeterias of the Studentenwerk Dresden (student union). These are among the best in Germany.

If you feel the need to clear your head from the daily learning routine, you can register for one of more than 40 different types of sports activities at the Dresden University Sports Center. You can also learn a foreign language for free or take part in one of the many cultural and social programs offered by student university groups. Fellow students from more than 125 countries can meet and get to know each other at language tandem nights, on joint excursions, by designing and building a race car or by constructing an airplane.

For more reasons to choose TU Dresden and all relevant information at a glance, please check:

➤ tud.de/why-tud

Dresden for Students

Dresden is the capital of the Federal State of Saxony and with more than half a million inhabitants among the twelve biggest cities in Germany. Apart from its turbulent history, it is also most famously known for its diverse cultural landscape.

No matter whether you are interested in theater, opera, cabaret, and cinema or if you enjoy a stroll through museums or a night out at the pub, there is something available for everyone.

You can also get active in the many sports facilities in Dresden, including TU Dresden's own, or in the surrounding nature of the Elbe landscape, the Elbe Sandstone Mountains (Elbsandsteingebirge) or the Ore Mountains (Erzgebirge).

Those interested in weekend excursions will find that not only Dresden's surroundings have plenty to offer, but Berlin, Prague, Leipzig, and Wrocław are also easy to reach and only a short distance away.

Applying to TU Dresden

Most English taught master's programs at TU Dresden start in the winter semester, i.e. on Oct 1st each year. The respective application period for international applicants usually commences on April 1st of the same year. Some programs start additionally or exclusively in the summer semester. Application deadlines vary according to your educational background and your nationality, so please make sure to check online.

TU Dresden is a member of uni-assist e.V., the service organization for international university applications. We have commissioned uni-assist to accept and examine application documents from applicants who have graduated from foreign secondary schools or institutions of higher education. The application for all English taught master's programs at TU Dresden (except for master's programs at IHI Zittau, Joint Studies in Intellectual Property Law and Data Law, Tropical Forestry, GroundwatCH as well as Water Security and Global Change) is managed by uni-assist for applicants with non-German first degrees. You can find all further info at [↗ tud.de/application](https://tud.de/application).

Please note that several of the master's programs include an aptitude review procedure to verify that the first university degree matches the scientific requirements of the master's program.

TU Dresden is a public university and does not charge any tuition fees. However, students are required to pay a semester contribution of about 340 € for one semester (i.e. 6 months). Included is a ticket for public transport (the so-called "Deutschlandticket" which allows you to use all regional trains in Germany and public transport in the cities). In general, Dresden offers very high quality of living at moderate costs compared to other big German cities. For your basic costs, i.e. rent, food, clothes and personal items, you should budget about 850 € per month.

Depending on your background and the program you have chosen, there are various possibilities for financial support, including specific scholarship programs. Please check the respective master's programs website or see [↗ tud.de/internationales/stipendien](https://tud.de/internationales/stipendien) for scholarships. Please also keep in mind that there might be additional funding possibilities in your home country!

Biochemistry

Biochemistry is a two-year full-time international Master's program that focuses on the molecular foundations of biological processes as well as the manipulation of biological pathways and biomolecules for technological applications.

The program is organized into two tracks – Chemistry of Biological Systems and Technical Biochemistry – which cover a wide variety of topic areas including Chemical Biology, Bioanalytics, Molecular Cell Biology, Molecular Genetics, and Genome Engineering.

To qualify, applicants must have completed their bachelor's degree or comparable in chemistry, biology, molecular biotechnology or a comparable scientific field and provide an international English proficiency test at an advanced level of B2 CEFR or better (e.g., IELTS 6.0, TOEFL iBT 79 / new 4.5, UNICert II).

Biology in Society

Bringing biology into society requires us to understand biological roots of societies and societal impacts on biology. In the Master's program **Biology in Society** students will obtain profound knowledge of animal and plant genetics, evolution, physiology and reproduction, but also methods to communicate science effectively. For example, they will learn about doping research, lipidology, or will test their own food genetically but may also discuss how medical CRISPR-Cas9 applications impact the right of self-determination of individuals. The students run their own journal BioS Reports. An important part of the curriculum is research ethics and methods, science policy and animal testing.

To apply, please provide a university degree in biology or related subjects. Non-native speakers of English will need proof of language proficiency (e.g., TOEFL 79 / new 4.5, IELTS 6.5) or similar.

Chemistry

Chemistry is a two-year full-time international master's program covering advanced fields of materials chemistry and biologically oriented chemistry. A broad spectrum of modules including analytical chemistry, biochemistry, computational chemistry, electrochemistry, inorganic chemistry, organic chemistry, physical chemistry, polymer chemistry, radio- and radiopharmaceutical chemistry, sustainable chemistry and technical chemistry addresses important societal needs in the fields of circular economy, digitalization, energy, environment, food, health, and sustainability.

To qualify, applicants must have completed a first qualifying university degree in chemistry or a comparable specialist field and provide an international English proficiency test at an advanced level of B2 CEFR or better (e.g., IELTS at least 6.0 in all sub-aspects, TOEFL iBT at least 75 / new 4.5 overall and at least 18 points / new 4.0 in each sub-aspect, UNICert II). Studies can be started in winter and in summer.

Mathematics

Mathematics is not only a school of thought that teaches critical thinking – a vital skill in many places in our society – it is also the language of the natural sciences and technology. As such, it is a key competence for basic and industrial research and development, as well as for a wide range of application areas.

The Master's program **Mathematics** is research-oriented and provides a strong mathematical education in a creative and collaborative environment. It offers a high degree of flexibility in the choice of courses, scientific specialization, and non-mathematical minor subjects.

Applicants must hold a first university degree in mathematics or a closely related program of study. Proficiency in English at the B2-level according to the European reference framework (e.g., TOEFL 72 / new 4.0 or IELTS 5.5) is required. Studies can be started in winter and in summer.

Mathematics in Business and Economics

Mathematics is woven into the very fabric of financial markets and the financial industry as a whole. Mathematical methods are used for forecasting, modeling, simulation, for measuring and limiting risks, and for optimizing processes and production flows.

The Master's program **Mathematics in Business and Economics** is application-oriented and provides strong mathematical skills with a special emphasis on mathematical areas relevant to economy and finance. It includes a minor in economics and prepares our applicants for future jobs in fields such as risk management, statistics, auditing, and management consulting.

Applicants are required to hold a first university degree in mathematics or a closely related program of study. Moreover, applicants shall prove proficiency in English at the B2-level according to the European reference framework (e.g., TOEFL 72 / new 4.0 or IELTS 5.5).

Molecular Bioengineering

The Master's program **Molecular Bioengineering** brings together a novel combination of biology, biochemistry, biophysics, materials science, medical science, bioinformatics and nanotechnology.

Join us and learn the fundamentals of biology, biomedicine, and bionanotechnology. Combine life science with technology. Explore biology to understand how nature engineers its mighty molecules. Use nanotechnology and computational biology to engineer nanomachines, tiny molecular factories, and biomaterials for medical and industrial applications.

The program is targeted at students with a first university degree in biotechnology, biology, chemistry, physics, materials science, medical science, computer science or nanotechnology and a good command of English (e.g., TOEFL iBT 92 / new 4.5, IELTS 6.5).

Molecular Biosciences and Productive Biosystems

The Master's program **Molecular Biosciences and Productive Biosystems** provides a knowledge base in molecular biology, applied microbial physiology, and product development. It rests on three scientific pillars: "Functional Tools" will provide students with theoretical and practical knowledge. "Productive Pathways" teaches the fundamentals in microbial physiology, metabolism and bioenergetics. "Application Technologies" is where tools and pathways are fused into fields such as biocatalysis, biotransformation, metabolic engineering and environmental monitoring.

Applicants must hold a first university degree in a natural science (typically biology, biotechnology, life science, biochemistry or biophysics) with demonstrated fundamental knowledge in genetics, molecular biology and microbiology. Moreover, applicants must prove proficiency in English at an advanced B2-level according to the European reference framework (TOEFL > 79 / new 4.5 or IELTS > 6.5). Studies can be started in summer.

Organismic and Molecular Biodiversity

Understanding and safeguarding biodiversity is one of the key challenges of our time. However, the increased need for biodiversity research and scientific monitoring is not matched by the availability of trained personnel. For this reason, the TU Dresden and Senckenberg offer a comprehensive Master's program.

The program **Organismic and Molecular Biodiversity** is organized into three specializations: Species Diversity and Natural-History Collections, Structural and Functional Biodiversity and Molecular Biodiversity. The inclusion of collection-based research as well as applied topics such as nature conservation and biotechnology allows graduates to work in a variety of fields.

Applicants must hold a degree in biology or in closely related sciences such as forestry, agroecology, nature conservancy, landscape planning or geoecology and prove a good command of English (e.g., minimum higher B2 level according to the European reference framework; IELTS ≥ 6.0 ; TOEFL ≥ 80 iBT / new 4.5) must be proven.

Physics

The two-year Master of Science program in **Physics** aims to deepen insights into different areas of physics and their interrelations as well as into neighboring disciplines. The modular program includes fundamental concepts of experimental and theoretical physics as well as elective non-physics courses, which guarantees a diverse profile and prepares for interdisciplinary work. Five areas of physics specialization are offered: applied solid-state physics and photonics, solid-state and materials physics, soft condensed matter and biological physics, particle and nuclear physics as well as theoretical physics.

A highlight of the Master's program is the final one-year research phase at one of the physics institutes of TU Dresden or at an external research institution.

Applicants should hold a bachelor's degree in physics or in a closely related subject. Proficiency in English at the B2 level of the CEFR is required (e.g., IELTS 5.5, TOEFL 72 / new 4.0, UNiCert II). Studies can be started in winter and in summer.

Physics of Life

Biological Physics combines the power of physics and the complexity of biological systems. If you enjoy applying mathematical models and physical principles, then this field opens the door for you to cutting-edge research at the intersection of multiple disciplines including physics, biology, chemistry, and medicine. The Master's program **Physics of Life** provides a unique opportunity to learn how to solve exciting real-world biological problems through a physicist's lens.

If you are intrigued by the "how" and "why" of life at a fundamental level – how proteins fold, how cells communicate, or how organisms develop – biological physics provides a versatile platform to explore these questions in detail, using the rigorous, quantitative methods of physics.

The program is targeted at students with a first university degree in natural sciences (typically physics, biophysics or quantitative biology) or engineering, preferably nanotechnology, or in a closely related degree program, in particular advanced mathematics and a good command of English (e.g., TOEFL iBT 92 / new 4.5, IELTS 6.5).

Regenerative Biology and Medicine

Characterized by the close network of science and clinical practice, **Regenerative Biology and Medicine** is an extremely diverse and rapidly developing interdisciplinary field in which significant progress has recently been made.

This Master's program offers a highly interdisciplinary education in the fields of stem cell research, regenerative biology, molecular biology, tissue engineering and clinically oriented human biology and pathology. The program combines comprehensive theoretical knowledge with extensive practical experience, gained directly in the research laboratories of the cooperating institutes.

Applicants must hold a degree in biology, medicine or a related field, where a solid background in molecular and cell biology is acquired. We also expect wet lab experience as well as a strong command of the English language (non-native speakers must submit a test result – TOEFL 92/ new 4.5, IELTS 6.5 points).

Sustainable Electronics and Photonics

Sustainable Electronics and Photonics (SEP) is a pioneering program designed for the "Beyond Moore" era. It focuses on the research and development of thin-film electronics and modern photonics devices in a time when responsible, sustainable technologies are more critical than ever. This interdisciplinary master's degree integrates physics, chemistry, materials science, and electrical engineering to explore a diverse material portfolio—from organics and perovskites to metal oxides and nanowires.

Students gain deep expertise in next-generation devices, ranging from light-emitting and energy-harvesting technologies, flexible electronics, high-precision sensors to integrated smart systems. Uniquely, the curriculum balances high-level technical training with a mandatory focus on sustainability, resource management, and circular lifecycle concepts. We seek motivated candidates with a bachelor's degree in physics, chemistry, electrical engineering, or materials science; a sound knowledge of mathematics and physics; and English proficiency at the C1 level (IELTS 7.0 , TOEFL 95 iBT / new 5.0).

Technomathematics

Applied mathematics is a key competence in industrial research and development. As the language of the natural sciences, it is strongly intertwined with technological developments such as energy-efficient design, machine learning, secure communication or medical diagnostics.

The Master's program **Technomathematics** is application-oriented and provides strong mathematical skills with a special emphasis on mathematical modeling, numerical simulation, and scientific flexibility. It includes a minor in engineering or natural sciences, and prepares our applicants for future jobs in research-oriented industries.

Applicants must hold a first university degree in mathematics or a closely related program of study. Proficiency in English at the B2-level according to the European reference framework (e.g., TOEFL 72 / new 4.0 or IELTS 5.5) is required. Studies can be started in winter and in summer.

Civil and Environmental Engineering

Advanced Computational and Civil Engineering Structural Studies

Advanced Computational and Civil Engineering Structural Studies (ACCESS) seeks to facilitate the development of a strong knowledge base in the fields of computational mechanics and structural analysis, working collaboratively together with advanced civil engineering design. Technical innovations for challenging engineering tasks rely heavily on numerical simulations. Therefore, the program aims to provide the skills for understanding these approaches as well as modeling and analyzing in the broader context of application and design. The focus is on theory and application of computational mechanics, as well as research in numerical structural analysis, current developments in civil engineering design, and advanced construction methods.

Applicants should hold a degree in engineering, preferably civil engineering with extensive knowledge in mathematics and mechanics. An additional admission requirement is a good command of English (e.g., IELTS 6.0 or TOEFL iBT 79 / new 4.5).

Air Transport and Logistics

The aviation industry is known for its continuous expansion and consistent development. Therefore, there is a constant demand for highly qualified aviation specialists worldwide. Students of the Master's program **Air Transport and Logistics** acquire a diverse technical, operational, logistical, economic and legal knowledge of air transport and logistics systems. They learn to understand and analyse them as well as to identify related engineering problems.

Applicants must hold a first university degree from an engineering field (e.g., civil engineering, industrial engineering, traffic engineering, mechanical engineering, electrical engineering or computer science), a natural science field (e.g., physics, mathematics, geography or geodesy) or in transport economics. English language skills at level B2 CEFR must be proven.

Ecosystem Services

In the context of the global loss of biodiversity and ecosystem degradation, **Ecosystem Services** as the direct and indirect contributions of ecosystems for human well-being are gaining increased attention in science, policy and society. The international master's program provides students with the knowledge base and methods to analyze pressing environmental problems and to develop societally relevant solutions.

A special focus lies on interdisciplinary and transdisciplinary approaches from the natural and the social sciences in order to conserve and sustainably use biodiversity and to secure the sustainable provision of ecosystem services for present and future generations.

Applicants must hold a degree in life or environmental sciences, economics, social sciences, geography, forestry sciences or related fields and have a good command of English (e.g., minimum higher B2 level according to the European reference framework; IELTS ≥ 6.0 ; TOEFL iBT ≥ 80 / new 4.5).

Geoinformatics

The Master's program in **Geoinformatics**, offered by the Faculty of Environmental Sciences, focuses on the development and application of advanced scientific and technological methods in geoinformatics. As a branch of applied computer science, geoinformatics centers on spatial data analysis and solving complex geographical questions. Students learn to apply IT-driven solutions to challenges in geosciences, forestry, hydrosociences, and environmental planning. This discipline provides the scientific foundation for navigation systems, GIS, and spatial decision-support tools. By improving system understanding, Geoinformatics plays a vital role in addressing global issues like climate change and the sustainable management of natural resources.

Applicants must hold a bachelor's degree (or equivalent) in Environmental Informatics, Geodesy, Geoinformatics, Geography, or a related field with sufficient background in spatial sciences and IT.

Proof of English language proficiency is required.

Studies can be started in winter and in summer.

Groundwater and Global Change – Impacts and Adaptation

As the largest liquid freshwater reservoir on earth, groundwater is an essential resource for adaptation to climate change and reduction of socio-economic vulnerability.

The Joint Master Program in **Groundwater and Global Change – Impacts and Adaptation (GroundwatCh)** embeds complementary expertise from environmental engineering, and water and climate science to address groundwater resources assessment, management and monitoring. GroundwatCh aims to study groundwater and its interactions with surface water, ecosystems, climate, human activities and global change.

Applicants must prove: I) completion of a higher education degree equivalent to a B.Sc. degree with a good final mark in: hydraulic, civil, environmental or agricultural engineering, geosciences, environmental sciences, geography, geology, or any other similar subject; II) proficiency in English: B2-level (IELTS $\geq$ 6.0; TOEFL $\geq$ 80 / new 4.0 or equivalent tests). Details on tuition fees and possible scholarships on our website.

Hydro Science and Engineering

Water is a critical resource. Climate change, population increase and urbanization lead to fast-growing demands of water. The Master's program **Hydro Science and Engineering** focuses on water management for various applications from urban to rural in different climatic zones. It combines natural and engineering sciences for an in-depth understanding of the numerous water related challenges in an increasingly extreme world. This program meets the international standards necessary to pursue and develop a career with national and international authorities and organizations, engineering and consulting enterprises, as well as in research.

Applicants must: I) hold a bachelor's degree in environmental sciences, natural sciences, or in an engineering discipline, minimum duration of three years; II) prove proficiency in English, showing C1-level according to the European reference framework. For details on scholarships, visit our website.

Mobility Systems

Planning transport systems of the future – data-based and sustainable: The Master's program **Mobility Systems** provides in-depth knowledge on the collection and analysis of data on mobility behavior. The mobility behavior of road users is modeled and its effects on society, the economy and the environment are examined. In addition, methods of mobility planning are taught, particularly with regard to environmentally friendly and innovative mobility options.

The Master's program is research-oriented. Students can choose from a wide range of modules, e.g., in data sciences, environmental sciences and transport sciences, with regard to road, rail and air transport.

Admission requirements include a first university or equivalent recognized degree in transportation science or a related field, a Graduate Record Examination (GRE) for applicants without a university degree from a university in the European Union, an Aptitude assessment procedure and English language skills at level C1 CEFR.

Public and International Economics

Today's most pressing economic challenges—such as climate change, financial crises, disruptions in commodity markets, and income inequality—are inherently transnational. Addressing these complex issues requires a deep understanding of both national and international policymaking.

Our Master's program in **Public and International Economics** (PIE) equips you with advanced methodological and scientific skills, preparing you to develop effective solutions to economic policy challenges in a globalized world.

Applicants must hold a first university degree in economics with sound knowledge of economic theory and quantitative methods. Moreover, they must prove proficiency in English at the B2 level (CEFR).

Transportation Economics and Data Science

The design of mobility, transport and logistics systems is one of the main societal challenges. Our Master's program in **Transportation Economics and Data Science** provides students with scientific methods and tools for understanding, processing and solving imminent transport-related issues. The program comprises five required modules and elective modules in the subject areas of economics, business administration, business informatics, mobility planning, road, rail, and air transport, as well as supplementary qualifications.

Applicants must hold a first university degree in the field of transport and traffic science, economics or STEM subjects (mathematics, information technology, natural sciences, and technology). Good knowledge in economics, business administration and quantitative methods, as well as English language skills at level B2 CEFR must be proven.

Tropical Forestry

Drawing on a century-long expertise in forest sciences, the MSc **Tropical Forestry** program qualifies future decision-makers and change agents with multidisciplinary skills to manage socio-ecological systems in tropical and subtropical forestry across multiple governance levels. Students can tailor their profiles by specializing in either forest governance or forest management.

Through this program, you will learn from and work alongside a competent academic and research team, who will supervise your field research in international tropical or sub-tropical contexts. Applicants must have a university degree in forestry or a related field and knowledge of English (e.g., TOEFL iBT ≥ 80 / new 4.5 or IELTS ≥ 6.0 or a Certificate of English language as medium of instruction during the bachelor's education).

Water Security and Global Change

The Joint Master's program **Water Security and Global Change** offers an advanced and globally oriented educational pathway addressing pressing water security issues. Designed collaboratively by renowned institutions – Technische Universität Dresden (TUD), Indian Institute of Technology Madras (IITM), and Rheinisch-Westfälische Technische Hochschule Aachen (RWTH Aachen) – the program combines diverse international perspectives, blending academic rigor with practical insights. Students engage deeply with technical, environmental, and socio-economic dimensions of water management, gaining competencies highly sought by regional and global stakeholders.

Admission prerequisites include a bachelor's degree in engineering and demonstrable English proficiency (minimum TOEFL iBT score of 88 / new 4.5 or IELTS 6.5). Graduates receive a Master of Science (M.Sc.) degree, recognized equivalently as a Master of Technology (M.Tech.) in India. Studies can be started in winter and in summer.

Computational Modeling and Simulation

The research-oriented interdisciplinary Master's program **Computational Modeling and Simulation** offers application-independent training in the foundations of computational modelling (i.e. learning models from data) and simulation (i.e. numerical simulation of models). Specialization is provided in application-specific tracks, offering unique flexibility to students. The program also offers the possibility to fast-track into a structured PhD program, benefitting from the participation of local partners in the relevant fields.

Candidates must hold a first university degree qualifying for professional activity in computer science, mathematics, natural sciences, economics or engineering, special knowledge of computer programming as well as mathematical and scientific basics and prove knowledge of English corresponding to at least level B2 of the European Frame of Reference for Language (e.g., TOEFL iBT 80 / new 4.5 or IELTS 6.0).

Computer Science

The research-oriented Master's degree program in **Computer Science** provides you with both applied and scientific expertise in the focus areas of your choice.

You can choose between two tracks: the Open Track and the Distributed Systems Engineering track. The Open Track offers you a broad selection of eight subject areas such as systems architecture, cyber-physical systems, visual computing and machine learning, human-computer interaction and interactive media. The Distributed Systems Engineering track enables you to cope with challenges in the field of distributed (software) systems and provides you with in-depth knowledge of software engineering, system architecture and security.

Applicants must have a first professionally qualifying university degree in computer science, possess sufficient specialist knowledge of specific computer science topics, and prove English language skills at level C1 of the European Frame of Reference for Language (e.g., TOEFL iBT 95 / new 5.0 or IELTS 7.0). Studies can be started in winter and in summer.

Nanoelectronic Systems

Nanoelectronic systems offer a variety of applications, but their design and implementation is becoming increasingly complex. This is the motivation for the Master's program **Nanoelectronic Systems**, which focuses on three key areas: technologies for nanoelectronic systems, design of nanoelectronic systems, and applications of nanoelectronic systems. Furthermore, traditional scaling ("More Moore") will be covered, as well as ideas and concepts for "More than Moore" and "Beyond Moore".

Applicants must hold a first university degree in electrical engineering, information technology, physics, or similar. They have to prove particular specialist knowledge in advanced mathematics, analogue and digital circuit design, electro-magnetic fields, systems theory, operation and construction of basic electron devices, object-oriented programming, as well as English language skills corresponding to an advanced level B2 of the Common European Framework of Reference for Languages (e.g., TOEFL iBT 94 / new 4.5 or IELTS 6.5).

International Studies in Intellectual Property Law and Data Law

The LL.M. program **Intellectual Property Law and Data Law** is a one year postgraduate course offering students specialized knowledge on Intellectual Property Law, in particular Copyright, Data Protection, Trade Mark and Patent Law. Our focus is on legal questions associated with new technologies, multi-media and the internet. The program is unique in offering participants a practice-oriented specialization in the field of Intellectual Property Law.

Applicants must hold a bachelor's or higher degree in law, computer science, engineering, media studies, or another subject. Graduates of a non-juridical university course may be admitted if they can prove that they have sufficient legal knowledge (at least 5 ECTS). Furthermore, professional experience of about one year and a good command of English (e.g., TOEFL iBT 90 / new 4.5 or IELTS 6.5) must be proven. Please note that in addition to the semester fees, there is a tuition fee of 2500 euros per semester studied at TUD. Studies can be started in winter and in summer.

Joint Studies in Intellectual Property Law and Data Law

The Master's program **Joint Studies in Intellectual Property Law and Data Law (MIPDaL)** is a one year post-graduate Erasmus Mundus Joint Master Program in cooperation with partners in France, Estonia, Spain and the UK. The program offers specialized knowledge on Intellectual Property and Data Law. It is divided into two parts, which students spend in two different universities in two countries and therefore earn two degrees from two partners. The first part is designed to get a profound foundation in patent, trade mark, design and copyright law. In the second semester, students specialize in either Intellectual Property Law, Law of Creative Industries or IT & Data Law.

Applicants must hold a bachelor's or higher degree in law of at least 240 ECTS or 4 years of previous studies. Furthermore applicants must prove knowledge of English corresponding to at least level C1 of the European Frame of Reference for Language (e.g., TOEFL iBT 100 / new 5.0 or IELTS 7.0). Please note that tuition fees apply (see website), however, the EU Commission awards 12 full scholarships each year.
