- Daniel Reiche
- Ronny Tschüter
- BenchIT team

Agenda

- Design Goals
- Implementation Guidelines
- The BenchIT Concept – From Measurement to Analysis
- BenchIT – Different Solutions for Specialized Purposes
- BenchIT – Step by Step
- BenchIT-Website
- Performance Analysis and Benchmarking Project Approaches
- BenchIT – Ease of Use

Design Goals

Original targets

- Simple interface for performance measurements
- Easy comparison of different measurements
- System independence (UNIX, Linux)
- Generating of gnuplot figures

Specification under construction

- User friendly tool infrastructure (GUI/Website)
- Widespread configuration possibilities
- Save measurement environment for later validation
- Database management for result files
- User management for stored data
- Cross-compiling and remote measurement
- Incorporation of a Architecture and Microarchitecture Information Database (AID)

Implementation Guidelines

- Platform independent
 - POSIX conformability
 - ANSI-C conformability
- Usage of sh and cc only
- No make files
- Minimized size of the sources
- Plain text for
 - Configuration data
 - Results
- GPL licence model

The BenchIT Concept – From Measurement to Analysis

BenchIT – Different Solutions for Specialized Purposes

● **BenchIT measurement**

- Command Line Interface (CLI)
- BenchIT-GUI for
 - Local Measurement
 - Remote Measurement
 - Compile and run on the remote system
 - Cross-compilation on the host system and run only on the remote system
- Derived special solution: Standalone versions for documentation and demonstration of specific features and problems

● **BenchIT visualization of results and comparison of different runs**

- BenchIT-Website
- BenchIT-GUI

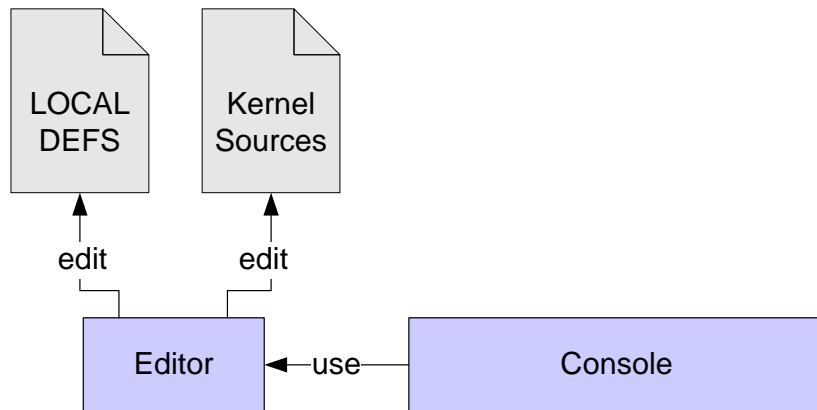

BenchIT – Step by Step

BenchIT – Step by Step

What is BenchIT?

*"Contra to common belief, performance evaluation is an art."
(Raj Jain, 1991)*

- and even artists need some tools.
The BenchIT project is designed to provide the computational tools necessary to evaluate a given computer system successfully.

BenchIT is a freely available framework, for performance-measurements and analysis of UNIX based HPC systems. It does only rely on a POSIX compliant shell and a C-compiler, so you can run the core BenchIT on UNIX, Linux, BSD, MacOS X, and Solaris. BenchIT enables you to do measurements on a wide variety of systems, as the BenchIT-Core contains all that is needed. However, for analysing and comparing your measurements, you can use these Webpages or the Java-driven BenchIT-GUI.

What is the BenchIT-GUI?

The *BenchIT-GUI* is a Java-driven front end for the actual core measurement system, allowing easy creation of measurements, local as well as remote through ssh, and comparisons between different results. To get an idea as to what the GUI enables you to do, have a look at these screenshots (and those located under the **Resources - Screenshots** tab).

plot your measurement results with a single click

create and manage remote hosts to run measurements on

easy to use built-in editor with syntax highlighting

compare your results with our online result database

You can download *BenchIT* under **Resources**, have a look at our Wiki or view all documents published by our team.

Get a Login

The screenshot shows a Mozilla Firefox browser window displaying the BenchIT website. The address bar shows the URL <http://www.benchit.org/index.php?module=getacc&>. The page features the BenchIT logo (Performance Measurement for Scientific Applications) and a navigation menu with buttons for Home, News, Resources, Communication, Get an Account, and Imprint. A "registered user login" section includes fields for login and password, and a "lost password?" link. Below the navigation is a link to "create an account" and "registration form". The main content area is titled "BenchIT Registration Form" and contains a registration form with the following sections:

- Personal Information:** Position/Title, First Name*, Last Name*, Organization*, Department.
- Contact Information:** Street, City, Phone, Mobile, Fax, Email*, Website.
- Account Information:** Requested Login Name*, Password*.

At the bottom of the form is a "Fertig" button. To the right of the form is a sidebar with the heading "BenchIT Registration" and the text: "The access to the BenchIT data evaluation platform requires a valid login on this website. Please fill out the registration form on the left hand side to obtain such a login. More information on why this is necessary can be found in the FAQ's. Please note that fields marked with a small star (*) have to be filled in. All information provided will be treated according to the local laws on data security, will only be used internally, and not shared with third parties." Below this is the heading "Personal Information" and the text: "Please specify some basic personal information about yourself and your organisation."

Compare Different ... Kernels which Run on Both

The screenshot shows a Mozilla Firefox browser window displaying the BenchIT website. The browser's address bar shows the URL: `http://www.benchit.org/index.php?module=plot&sess_id=1147438927`. The website header includes the BenchIT logo and navigation tabs: **MyBenchIT**, **Analysis/Plot**, **Resources**, **Communication**, **Administration**, and **Imprint**. On the right side, there is an **account information** section with the following details:

quota used:	2680 kB
quota limit:	100000 kB
new share requests:	26

A **Logout** button is located below the account information. The main content area shows a breadcrumb trail: `>> analysis/plot >> architecture >> attribute >> kernel`. Below this, there is a section titled **Select your Measurementkernel** with a small icon of a line graph. The section lists several measurement kernels with checkboxes for selection:

Accessed Memory in Byte	
memory.latencies.C.D.D.pointerchasing	<input type="checkbox"/>
access size	
memory.latencies.C.D.D.long	<input checked="" type="checkbox"/>
Matrix Size	
numerical.matmul.C.D.D.double	<input type="checkbox"/>
numerical.matmul.F77.D.D.double	<input type="checkbox"/>
numerical.matmul.Java.D.D.double	<input type="checkbox"/>

A **proceed** button is located at the bottom right of the selection area.

Quick Analysis Wizard

The screenshot shows the 'Quick Analysis Wizard' interface in a Mozilla Firefox browser. The browser title is 'The BenchIT Project | BenchIT Web v3 | (c) ZIH - TU Dresden'. The address bar shows the URL: `http://www.benchit.org/index.php?module=plot&action=qaw1&sess_id=1198021405&`. The page features the BenchIT logo (Performance Measurement for Scientific Applications) and an 'account information' box showing: quota used: 202 kB, quota limit: 100000 kB, new share requests: 9, and a 'Logout' button. Navigation tabs include 'MyBenchIT', 'Analysis/Plot' (selected), 'Resources', 'Communication', 'Administration', and 'Imprint'. The main content area is titled '>> analysis/plot >> QuickAnalysis Wizard' and contains a 'Select the attributes you'd like to analyze' section. This section has two checkboxes: 'enable auto-magic filtering' (unchecked) and 'plot with default options' (checked). Below are two categories of attributes: 'hardware attributes' and 'software attributes'. Each attribute has a list of options and an 'unselect List' button.

Category	Attribute	Options	Action
hardware attributes	Processor Name	AMD Athlon AMD Athlon 64 AMD Athlon 64 X2	unselect List
	Hostname	A1300 A64.WH11.TU-Dresden.De BI-Celsius-W360.inf.tu-dresden.de	unselect List

Quick Analysis Wizard

The screenshot shows the 'Quick Analysis Wizard' web interface. The browser window title is 'The BenchIT Project | BenchIT Web v3 | (c) ZIH - TU Dresden | Mozilla Firefox'. The address bar shows the URL: http://www.benchit.org/index.php?module=plot&action=qaw1&sess_id=1198019236. The page has navigation tabs: MyBenchIT, Analysis/Plot, Resources, Communication, Administration, Imprint. The breadcrumb is '>> analysis/plot >> QuickAnalysis Wizard'. A blue header says 'Select the attributes you'd like to analyze'. There are two checkboxes: 'enable auto-magic filtering' (unchecked) and 'plot with default options' (checked). The interface is divided into 'hardware attributes' and 'software attributes'. Hardware attributes include Processor Name (Intel Core2-Duo T5500, Intel Core2-Quad Q6700), Hostname (BI-Celsius-W360.inf.tu-dresden.de, localhost), and Processor Clock Rate (1.667 GHz, 2.667 GHz). Software attributes include Kernel (numerical.matmul.C.0.0.double) and Compiler (cc, gcc). Resultfiles include Resultfile (InC2_1667M_2007_06_28_23_14_18.bit, IC2Q_2667M_2007_11_30_00_17_33.bit). At the bottom are buttons: unselect All, filter lists, plot file(s). A copyright notice at the bottom reads '© 2002 - 2007 Center for Information Services & High Performance Computing - Technische Universität Dresden'. A status bar at the very bottom says 'Fertig'. A modal dialog box is open in the center, titled 'Die Seite mit der Adresse http://www.benchit.org m...', containing the text: 'Do you really want to plot these files: InC2_1667M_2007_06_28_23_14_18.bit IC2Q_2667M_2007_11_30_00_17_33.bit using default plotting options?'. It has 'OK' and 'Abbrechen' buttons.

Getting the Sources

The screenshot shows a web browser window displaying the BenchIT website. The browser's address bar shows the URL `http://www.benchit.org/index.php?module=resources&action=files`. The website header includes the BenchIT logo and navigation tabs for MyBenchIT, Analysis/Plot, Resources, Communication, Administration, and Imprint. An account information box in the top right corner shows: quota used: 202 kB, quota limit: 100000 kB, new share requests: 9, and a Logout button. The main content area is titled '>> resources >> files' and features a 'BenchIT Files' section. This section is divided into 'BenchIT Releases' and 'Weekly Snapshots - May be buggy'. Each section contains a table with columns for package, file type(s), description, and date.

package	file type(s)	description	date
benchit-release	 	Version 5.1 of the BenchIT System <i>containing the core measurement system, a basic set of measurement kernels and the graphical user interface</i>	2006-Jun-06
benchit-release-nogui	 	Version 5.1 of the BenchIT-Core System <i>containing the core measurement system and a basic set of measurement kernels</i>	2006-Jun-06

package	file type(s)	description	date
benchit-snapshot	 	weekly snapshot version of the BenchIT System - most current but may contain bugs <i>containing the core measurement system, a basic set of measurement kernels and the graphical user interface</i>	2007-Dec-16
benchit-snapshot-nogui	 	weekly snapshot version of the BenchIT System - most current but may contain bugs <i>containing the core measurement system and a basic set of measurement kernels</i>	2007-Dec-16

Performance Analysis and Benchmarking Project Approaches

Reference considerations in context of the

ZENTURIO Experiment Management System for Cluster and Grid Computing

<http://www.dps.uibk.ac.at/projects/zenturio/related.html>

Multi-Experiment Performance Analysis and Benchmarking

- **PMaC** Performance Modeling and Characterization
San Diego Supercomputer Center, USA
<http://www.sdsc.edu/pmac/pmac.html>

- **MAPS (Memory Access Pattern Signature):**

Measurement of memory bandwidth for various HPC architectures

- **MetaSim:**

Determines code block memory access patterns for performance prediction of serial NPBs (NPB: NAS Parallel Benchmark)

- **Performance Predictions:**

Performance Predictions using MAPS, MetaSim, and Dimemas of NPB and PETSc kernels (PETSc: Portable, Extensible Toolkit for Scientific Computation)

- **ASAPP (Application Scheduler & Performance Portal):**

Portal that enables performance guided job scheduling across multiple architectures

- **Terascale Application Information:**

Scalability information for NPACI (National Partnership for Advanced Computational Infrastructure) applications and their bottlenecks in large processor runs

- **PMaC HPC Benchmark Suite:**

A compact set of orthogonal benchmarks to measure fundamental performance models of HPC systems

Multi-Experiment Performance Analysis and Benchmarking

- **Paradyn** Performance Measurement Tools, University of Wisconsin-Madison, USA
- **APART** IST Working Group on Automatic Performance Analysis
- **SKaMPI** Special Karlsruher MPI Benchmark , University of Karlsruhe, Germany
- **Automated Benchmarking Tool** Information Technology Laboratory, National Institute of Standards and Technology, USA
- **XPARE** eXPeriment Alerting and REporting, University of Utah, University of Oregon

Parameter Study

- **Nimrod** A Tool for Distributed parametric Modelling, Monash University, Australia
- **ILAB** A Parameter Study Tool, Nasa Ames Research Center, USA

Support for Specialized Computer Architectures

Support for Grid Architectures

- **Unicore** A Uniform Interface to Computing Resources, Germany
- **OGSA** Open Grid Service Architecture, the Global Grid Forum
- **JIPANG** A Jini-based Computing Portal System, Electronical Laboratory, Tokyo Institute of Technology, Japan

Experiment Management

- **ZOO** A Desktop Experiment Management Environment, University of Wisconsin-Madison, USA
- **JAM** Jini Technology-enabled Application Manager, Swiss Center for Scientific Computing (CSCS), Switzerland

Combined Approaches
